SYNTHETIC DEMO - NOT FOR ENGINEERING USE

Project ALPHA - Filter water separator

1. Scope

Synthetic specification for an aviation fuel filtration vessel.

All names and values are fictional. No customer data.

2. Operating and design requirements

Design pressure: 16 bar(g).

Design temperature: -20 to +60 deg C.

Rated flow rate: 120 m3/h.

3. Construction

Vessel material: stainless steel; grade to be agreed.

Design code: EN 13445.

4. Documentation

Material certificates shall be supplied.

No corrosion allowance is specified in this document.
